Hi Again John.

I have made some modifications to the ASP private code to find out where the problem is.

Here is the output from my modifications and the source where the problem is

DEBUG OUTPUT:

```

SOURCE:

Function BOOL CASPState::RunScript()

```
// MB
DEBUGCHK(m_bstrScriptData);
DEBUGCHK(m_piActiveScriptParse);
DEBUGCHK(wcslen(m_wszModName) > 0);
DEBUGMSG(1, (_T("CASPState::RunScript m_piActiveScriptParse = 0x%x,
m_bstrScriptData= 0x%x\r\n m_wszModName=%s\r\n"),
m_piActiveScriptParse,
m_bstrScriptData,
m_wszModName));

hr = m_piActiveScriptParse->ParseScriptText(
m_bstrScriptData, // script text
m_wszModName, // module name
NULL, // pstrItemName
NULL, // punkContext
0, // End script delemiter
1, // starting line #
0,
NULL, // pvar Result
&except // error info if there's a failure, must not = NULL
);

if (SCRIPT_E_REPORTED == hr)
hr = S_OK;
```

Re: Problem with ASP on Webserver

```
if (FAILED(hr))
{
.....
}

// MB
DEBUGMSG(1, (_T("CASPSite::RunScript ParseScriptText DONE\r\n")));
```

We never reach the point where I write

CASPSite::RunScript ParseScriptText DONE

So it fails in the ParseScriptText function. I have looked for the source for the IID\_IActiveScriptParse but can not find it so I think it must be a part of the private code that is not available to me?

One or more times the debug output reported

ASP: Parse error in script caught by IActiveScript  
ASP: Error string is NULL, err code = ...

A couple of times before the crash when the webpage was request by the browser.

I hope this information helps to find the problem.

Best regards  
Frank J. K.

Hi John.

I have made a new debug dump and it looks like this.

```
20758 PID:c7d35c6a TID:a7b85fc2 0x87be9800: ASP: CScriptSite::Release,
count is 2
20759 PID:c7d35c6a TID:a7b85fc2 0x87be9800: ASP: CScriptSite::Release,
count is 1
20759 PID:c7d35c6a TID:a7b85fc2 0x87be9800: ASP: In CASPSite::~~CASPSite
20760 PID:c7d35c6a TID:a7b85fc2 0x87be9800: ASP: ExecuteASP completed
processing, returning to httpd
```

```

One time when I saw the error I found that the problem must have something to do with something trying to access the vbscript.dll because the

BVA=01b25ff8

BVA

Bad Virtual Address

Indicates the Virtual Address being accessed which resulted in fault.

and if you look at the modules and symboles it matches the address of the VBScript.dll.

So the offset inside the VBScript.DLL must be 0x95FF8 and looking at the MAP files it looks like it is the GenPcodeLoop function, but I'm not sure.

```
0001:00095f08 ?GenPcodeLoop@Parser@@AAAXPAUParseNode@@@Z 10096f08 f  
vbscript:pcode.obj  
0001:00096a48 ?GenCall@Parser@@AAAXPAUParseNode@@W4E_ADM@1@@@Z  
10097a48 f vbscript:pcode.obj
```

I have attached the map files for the services.exe, vbscript.dll, asp.dll and httpd.dll

When the crash occur I can not see any symboles and the call stack is not usefull, sometimes it is a invalid instruction and other kind if exceptions, so it seems that something is trying to access a uninitialized area in RAM.

Looking at the address of the crash it is outside the services.exe, is that because the ASP.DLL, VBScrip.DLL and HTTPD.DLL is loaded dynamically and

Re: Problem with ASP on Webserver

becomes a part of the services.exe address space? or is it in fact a  
invalid  
address in this case?

I hope the information can help to solve the problem and find the function  
where the crash occur.

I'm really looking forward to a solution to the problem.

Frank-- first sorry you're hitting this, and many thanks for doing a lot  
of  
initial investigation here.

Not positive, but my gut tells me you're running into some sort of  
unknown  
race condition in VB that is taking down ASP :( Could you get a call  
stack  
of where the excetpion is occuring (you should get function names at  
least  
even if you can't debug VBscript) and pass that to newsgroup too? Thanks

Hi Again

I just enabled more ASP debug information and the dump  
looks like this:

251238 PID:87d36fb2 TID:87c4b9e2 0x87be9000: ASP:

Hi

I have a problem with the web server on windows CE 5.0 when running an ASP script. When the image is running in debug mode an exception occur in the web server and if I return it to the application (services.exe) not handled the server stop responding. Via telnet I have tried to stop the service HTP0; but it can not shutdown any more. It is as if it is not able to get access to some component or something because a critical section has not been released. I have dumped the debug out from the platform builder. The first request seen below here works fine but the next request for the ASP page cause the problem. This problem occurs when the page is requested very often. If I keep refreshing the page the web server respond is that it has run out of connections and it is busy.
