The .reg and the DllRegsterServer are redundant. You can tell I wrote this not long out of college not only by redundancy but also in that I didn't know how to use built-in ATL stuff very well in my manually implementing the fcn :).

I don't think it's a huge deal no matter which way you go, I'd personally go for the .reg file though so I wouldn't have to worry about manually registering COM object.

Valter, thank you very much.
I've not been able to test the solution out yet as my hardware isn't working
and I can't get a connection to the web server when running under the device emulator.

Alan
