Hi Siddarth ,

Thank you very much , my platform is also Windows CE 5.0.
But I am not success make it work untill I remove all IO driver at all .

Do you have any idea about this problem ? thanks a lot .

Best regards,
Calvin

Hello Calvin,

I made japanese locale for demonstration to the customer. In the platform settings --> locale, try uncheck "Strict localization checking in the build" check "Localize the build", choose "Default language" --> Japanese.

In "Locales", clear all first then, check all available Japanese and English.

In "codepages", check all the japanese and english ones.

Try doing a clean build again. This is with Windows CE 5.0... haven't used CE 6.0 yet.

regards,
Siddarth

Hi All ,

It seems have huge key event occur when windowsCE(local language set is Japanese) start half minute or more , when I click "start" menu in system , I can see the select item change very fast ,and them hung up quickly and lost respond totally .

but the system have no problem at all when local language is not japanese , why so strange ?

Can anyone give me some tip or comment ? thank you very much !

Best regards,
Calvin Liu

Hello everyone,

I am using same BSP to build my two WinCE platforms, the OS is work well when I set local language to english , but not in jansense .

There are no error occur when building the platform , but system behave is difference after CE start,the english os is no problem , but the jansense os will automatic hung up after os start about half minutes or more ,the screen is still show , but the system is totally have no respond yet .

I feel so strange and have no idea how to deal with, can anybody help me ? thank you very much .
