Hi all,

I am testing window media player OCX 7 control. I have added window media player OCX 7 and dependencies like directshow in catlog Item and m also getting wmpocx.dll, wmpocx_loc.dll and wmpocx_skin.dll in the release directory and also it's entry in ce.bib file.

But m not finding Window embedded 6.0 FP6 in my platform builder. which is also required for OCX 7 as mentioned in following link

<http://msdn.microsoft.com/en-us/library/bb821511.aspx>

Can anyone tell ...

- 1). how to get Window embedded 6.0 FP6?
- 2). what are the differences between OCX 6.4 and OCX 7.0. how can I differentiate OCX 6.4 and OCX 7.0.

Thanks,
Ranjit Ranjan
