Charles,

There is a bit of a difference between the posts. The other one was rather generic, this one has specific information, and a request for specific information about a specific HotFix from Microsoft related to a specific Knowledge Base Article. The same background info is contained in both posts, but no one had any information about my specific problem...only how to work around it (all of which is greatly appreciated, taken into account and implemented). Since this is a Newsgroup for Word.Application.Errors, I thought I would stand a better chance of finding answers to an application error related problem than I did in Word.VBA.Userforms, a Newsgroup not specifically related to Application Errors.

Thank for your time, attention, and assistance.

"Charles Kenyon" <msnewsgroup@remove.no.spam.addbalance.com> wrote in message news:Oz%23AvJjLEHA.892@TK2MSFTNGP09.phx.gbl... Answered (four-five times) in vba.userforms April 27-29. Please do not multipost.

In the Microsoft Word newsgroups it is considered bad form to post separate messages to multiple newsgroups. If you need to post in more than one forum (unusual) please post a single message with both forums in the header of that single message. That way (1) your question and the various answers stay together, (2) less space is used on the news servers, (3) less bandwidth is used on the Internet, (4) you only have to check one forum for answers that appear in both forums, and (5) you won't unnecessarily annoy the people you are asking for help. This isn't meant to criticize you. We were all beginners once and the only way to learn is to try. (BTW, a number of the Microsoft newsgroups don't want posting in more than one newsgroup, period. Check the FAQ. Take a look on the MVP FAQ website under getting help for more reasons as well as other suggestions for getting answers more easily and quickly. <http://www.mvps.org/word/FindHelp/Posting.htm>>
