I am running Office 2K, SR-1a and SP3, on Windows 2K, SP4. When using Word, the computer will freeze after typing only 2-5 sentences and I will have to reboot. Other software, such as WordPad, games, Internet Explorer and Outlook run without trouble.

Background: I have been using this software combination for several years without trouble. Due to a system crash I had to reformat drive C: and reinstall all software. I have since reformatted and reinstalled several times without resolving the problem. Does anyone have any ideas on how I can resolve this problem.
