G'Day Argh(!),

Look at <http://www.openoffice.org/>, and you will see a free download available of OpenOffice.org v1.1.1 – a full featured office suite comprising:

- Writer – Word Processor
- Calc – Spreadsheet
- Impress – Presentation and
- Draw – Drawing.

These products have a surprising degree of compatibility with Office, and do seem to be stable.

You will be able to open and edit basic Word files in Writer, although with the more advanced features the products are very different..

To e-mail them, I suggest you use Outlook Express – This has NOTHING to do with Office, but is part of the Internet Explorer Web Browser.

It's a pity you will not buy Office – I always use it!
