I am having the same problem, and none of the solutions so far seem to work. I have cleared all cookies, history, and temporary internet files. I have done a search of my hard drive by copying and pasting in the search bar the link that appears in the Hyperlink Browsed Pages display. I have even done a search of Registry using the sticky link. All to no avail. I can get rid of most Browsed Pages, but a dozen or so seem to be permanent. Is there anything else to try?
