Another keyboard shortcut to unlink fields is Ctrl-Shift-F9.

Yes, I know this option. But it saves only the data from the form... it makes a new file that includes something like:
"1. data"; "n. data"; "yet another data"

But I want a file that includes everything (normal texts, pics, etc.) from the original document plus the selected listbox entries as normal text... like

Original file with forms:

Name: ___ (<< I input my name here)

Profession: ___ (<< I input my profession here)

Building: [___] (<< and I select our building from this combo box)

Now I'd like to save it into a new file that doesn't include text boxes and combo boxes,

Re: a form problem

but normal text lines like:

Name: Tony

Profession: Net admin.

Building: C/12

Is it possible to save a form in this way?

"Save data only for forms" would make a file like:

"Tony";"Net admin";"C/12"
