Just a wee bit of clarification. Excel is not part of Word. It is a separate program that is included in the Students and Teachers Edition.

On the back of the box that my MS Office Word (STE) disc came in, it shows that Excel should be included as part of the package. A couple questions:

- 1) Should I have gotten Excel with this purchase?
- 2) Is Excel the program I need to open .XLS files?
- 3) If I download Excel Viewer 2003 from this website, will I be able to read .XLS files?
