Marlin Price wrote:

> I have created a fill in the blank form with 5−6 form fields. The form will be used as a base document and I want users to attach other documents as proof of compliance with certain standards. If I protect the form, when I finish the last fill in the blank, the form will not let me attach documents − it only goes back up to the first form field. The documents that are attached will often have highlighting and bold type. If I create a form field for an attachment − and cut and paste a copy of the document into it − the form changes the font and deletes the bold and highlighting.
