"By the way, I couldn't delete the returns in the template as the data in this field is populated from different fields in an XML file. The carriage returns aren't part of the template, they come from the XML file".

I can see xml becoming an important factor in working with documents – I'd better learn it quickly!

Don't even ask about deleting the carriage returns from the XML file – long story!

It always is – LOL!

Hi Tony,

As per my response to Graham's post:

"By the way, I couldn't delete the returns in the template as the data in this field is populated from different fields in an XML file. The carriage returns aren't part of the template, they come from the XML file".

Don't even ask about deleting the carriage returns from the XML file – long story!

Perhaps I'm missing the obvious but running a macro to manipulate the

Re: Word 200 Macro using replace

contents of a new document this way seems pointless – can't you just make the template the way you want it in the first place and dispense with the macro?
