Hi Robert:

- 1) Define styles in the Word document template containing the formatting you require.
- 2) Store in the database two columns, one containing the style name, the other containing the string.
- 3) Use VBA in Word to retrieve the strings from the database. It can automatically apply the associated style to each string as it brings it in.

Cheers

Hi,

I have a question.

I want to put a string through VBA in Word, which has a "RTF Syntax" in a Word document, but parsed, that is formatted.

I'll give you an example:

```
Sub ParseRTF()  
Dim txtStr as String  
  
txtStr = "{\rtf1\ansi\ansicpg1252\deff0{\fonttbl{\f0\fnil\fcharset0  
MS Sans Serif;}}\viewkind4\uc1\pard\lang1031\b\f0\fs17 This is an example of  
a String in RTF Format\par }"  
  
End Sub
```

So, now I have a String with RTF. The problem is now, how can I put this text in a Word Document, but it should be pasted already formatted, not just

Re: Hot to parse RTF String

as a plain text.

One way of doing this, is putting the String in a .rtf File, and then using this command: Selection.InsertFile FileName:="C:\TEST.rtf", Link:=True

But I don't want to use a file, because of the time doing a disk read. I want to paste the formatted string in the document directly.

I want to do this, because I have an MS Access Database, where I store the RTF Strings in Memo Fields. I want to read them from the database, and formatted, put them in a document.

Every help will be much appreciated.

Best Regards,
Robert Mileski
