Here's a better idea: Delete the page break. In the first paragraph that should be on the next page, right-click and choose Paragraph to get the paragraph formatting dialog, click the Line & Page Breaks tab, and check the "Page break before" box. See if that solves the problem.

If that particular style should always start a new page, you can add the "Page break before" to the definition of the style.

These are mostly new documents, but were created in compatibility mode, which is what I have to use until my clients make the switch. They are mostly resumes, and there is usually a new style at the top of the next page (Page 2 heading). I have not noticed the problem with longer documents in which there is not the combination of page break and new style at the top. If there's a way to do so, I can let you have an sample document with that behavior and see if it happens with your software.

Thanks.

Hi Dan,

I know this isn't going to sound very helpful, but I don't see any such behavior. Using the down arrow key, my cursor passes right through a manual page break without stopping.

Re: Cursoring Across a Page Break

Can you isolate anything else about these documents, besides compatibility mode and hard page breaks? Were the documents created in Word 2007 or in an earlier version? In which program version did you insert the page breaks? Are you running any add-ins? (In Word Options, on the Add-ins tab, look at the lists for both COM add-ins and Word add-ins in the Manage box.)

In Word 2007, in compatibility mode (.doc). When I put a hard page break in a document and attempt to use the up and down cursor arrow keys to move up and down through the document, the cursor stops at the page break. I can cross the page break using the right and left arrow keys, but the cursor backs up a line or two and I have to wait for it to cursor across those lines. If I am moving down in the document and come to the stop point before the page break and then press the left arrow key, it moves the cursor all the way to the top of the visible page, and I have to start moving the cursor again. Any idea why this is happening and how to get the cursor just to go across a page break?

I am using Windows XP on this machine, but have a newer laptop with Windows Vista, and the same thing happens in similar documents.

Thanks in advance.
