Is it saying it's low on memory or resources?

Let me apologize in advance for posting a question here that is not a document management issue. Don't know where to post it actually.

When you are about to perform a task that Word 2003 cannot undo, it displays a dialog box that says something like, "MS Word low on memory. Cannot undo this command. Do you want to continue? Yes/No?" Does anyone know how to prevent this prompt from appearing?

Background: I use Word 2003 with Adobe Acrobat Professional 7.0. When I select Adobe PDF->Convert to Adobe PDF, Word is tied up for a couple of hours because it takes that long to create a PDF: my manuals are very long, they have many graphics, and my computer is six years old. Typically, I run the Acrobat macro at 5 PM and go home, so that PDF generation will tie up my computer when I'm not using it. Recently, when I come to work in the morning, the PDF macro is interrupted by the 'no undo' dialog. I click YES and do paperwork until Acrobat is done. Although Word says that it is running out of memory, my computer has a GB of RAM.
