Your instructions apply to Word 2003, not Word 2007, which suggests that your version of Goldmine might not be compatible with Word 2007. You should check with the FrontRange folks about that.

The equivalent Word 2007 commands are  
Office Button | Word Options | Add-Ins | Manage: Disabled Items  
and  
Office Button | Word Options | Trust Center | Macro Settings.

By the way, your CapsLock key appears to be broken. Either that, or you are deliberately SHOUTING at the people from whom you ask help, which is poor netiquette and probably not the best approach.

TOOLS wrote:

We have installed Office 2007 and have Goldmine Premium Edition (SQL). I installed the GoldMine / Word link and see the GoldMine link options, but when attempting to use it such as adding a datafield to a template, the data selection window does not appear.

Also everytime I open Word (and Excel), I get the following Word / Excel Errors.  
"Automation Error, The requested operation requires elevation" then "Object variable or With Block variable is not set.". This occurs whenever we attempt to open or close a Word document. These errors pop up numerous times in succession.

FrontRange suggested that Word has disabled the macro and to go to Help > About Microsoft Word > Disabled Items and see if gmlink is disabled. Otherwise check in Word, Tools > Macros > Macro Security and set to Medium.

HOW DO I FIND HELP > ABOUT, AND HOW DO I FIND TOOLS?
