The code was desinged to work with Word Picture objects not OLE objects.
You just have to change one line of code to make it work with an OLE
Object(at least in Access and VB it works this way).

```
' Call the method to ask the OLE control to copy its contents to the  
ClipBoard  
NameOfTheOLEObject.Action = 4
```

Let me know how you make out. I'm currently finishing another project
and do not have any time right now to update this Word solution.
