Bob (or anyone else),

Do you know where I could find the hex & RGB values for the gray scale fills found in the paint bucket palette? There're around 23 of them.

Hi C.B.,

You didn't mention the version of Office you're using. The 2007 version has sort of a twist on what 'standard' can be <g>.

The original 16 choices, shown in the 'Highlighter' tool (top to bottom, left to right) are

Re: RGB Values of Word Color Palette

The 40 choices in the Font, line and fill color dialogs are (top to bottom left to right in the dialog) listed below. Where a color name appears in parentheses it is a web color name (not always the same as the Word tooltip color name. Word uses those parenthetical names internally in it's web page work for compatibility, as well as the asterisked standard names.

Can anyone share the RGB values of the standard Word (Powerpoint, Excel,
etc.) color palette? I keep reading about the pallettes being RGB but I
can't find their values anywhere. Maybe I've just not dug deep enough.>>
