: "Picture placeholders" affects only inline graphics.

====> Inlines affected would be images set as "inline" in the
Format|Picture|Layout tab, right? The only place I've used that
"inline" setting is in the appendixes; all others are set for
a -wrapped- setting, and some show while others so not
with -Picture Placeholders- on.

I wasn't aware of the difference and -Inline- images do indeed
come and go depending on the Placeholders settings; I checked
just for grins. But, -wrapped- may or may not react to that
setting. For me, at least, on my system.

"Drawings" covers

: wrapped ones. If you work in Normal view, you won't see wrapped
graphics

: regardless of the Options setting.

====> Does this imply I would see Inline images in Normal?

I didn't check yet due to time constraints, but it would
appear, with -Picture Placeholders- turned on, I don't see
anything but borders where the pictures would be if
they're -wrapped-, and no space at all for the -Inline- images.
e.g. none of my -Inline- appendix full page images show in
Normal View.

: ... Working in Normal view as much as

: possible is generally recommended for long docs (if you turn
off background

: repagination, this helps even more).

====> You can't really work in Normal and still work with
graphics?

====> When I'm writing straight text, that works well. I have to
switch to Print Layout though if there is an image on the page
and there are many images; probably 35 to 45% of the pages have
images on them.

Since they can sometimes jump to unexpected locations, I stop
and dress up the images about every ten pages or as long as I can

Re: Pic Placeholders

remember for sure what goes with what. Sometimes I use Tables, sometimes I don't; it depends on the situation.

I use two methods to Insert pictures: Usually I open PrintShop Pro and crop/resize/touchup the images, then Copy/Paste them into the document. PSP does add a noticeable overhead time to some Word operations, but not excessively compared to the benefits of using it. I can't really per-size/crop etc. the drawings because there are thousands to choose from in each folder with only a few that will be used, which isn't known until the text sh
