I don't have it at hand, but you should be able to turn it up by searching the Knowledge Base at microsoft.com or through Google. Try something like

Wd97 AND "mail merge" AND delimiter

> > *What should work is to duplicate the field names in the header source file*

Then I'm afraid you're going to be in very big trouble...

There's another Knowledge Base article, written for automating Office from VB, that describes how to (with luck) close messages that are waiting for user input. I'd try searching for that with something like

VB AND Off2000 AND dismiss AND message
