Hi Martha,

I'm not sure I follow exactly what you want, but this sounds a lot like a "one-to-many" type of merge. There's a Knowledge Base article on how to get Word to loop through records until a certain condition changes. You'll find a link to it in an article in the Special Merges section of my website.

> *I'm using mail merge on a pivot table output – e.g.*
> *when 3 people are sitting at a table, there would be three*
> *entries, but if 9 people are sitting at a table, there*
> *need to be 9 entries. I have figured out how to use "next*
> *record if" so it'll scroll through the records within a*
> *label, and when it reaches the condition that makes it not*
> *read any more records (until the next label), it just*
> *repeats the same info until it reaches the maximum*
> *possible I've allowed (12). I could do this also using If*
> *then else, nesting 12 commands, but it's not clear to me*
> *what command makes it move on to the next label. If I only*
> *want three entries, I'd like it to just move to the next*
> *label upon a certain condition, rather than repeating last*
> *line 9 more times.*
