Thanks for the info, Stefan. It made a big difference, but did not fix everything.

As instructed:

o I deleted the manual page breaks, substituting the use of the page break before/keep with next paragraph format options.

o I updated the references, and this seemed to fix the problem with Word inserting breaks immediately preceding a reference field (it would literally place it after the word and space, "see " used in the reference phrase, as in "See <Heading reference> on page xx"). Note however, that these paragraphs did NOT have manual page breaks associated with them (neither before nor after the paragraph). AND with one reference it made no difference (see below).

o I F9'ed selected text in the doc to update the references.

The doc looked clean.

When printing to PDF, I found that only one reference had a break inserted (over and over, using different print drivers), and that was in the front matter. Also, the 16 front matter pages were still being renumbered to all be page 19.

I removed the offending reference, opting instead to type it in (who needs a link?), and changed the section page numbering to start on page ii, instead of continuing from the previous section (which was the title page).

This workaround stopped the pages from being renumbered. However, there are no longer any links for any references, the TOC, or lists (figures & tables).

I checked the conversion settings, bookmark and link options, which *were* enabled, and tried printing to PDF again. I tried using the Adobe PDF print driver, and a PS print driver, and then using Distiller to convert to PDF. In both cases, the TOC and references were not in the PDFs.

Re: page breaks auto-inserted and pages renumbered when going to p

I can go with what I have, but have always thought it unprofessional to have items that should be links, but are not (e.g., the TOC). It might have to suffice if there is no resolution presented (I tried to find broken links in PDFs as a discussion subject, to no avail).

I'll look for further posts. Thank you again, Stefan.
