Hello,

If I have a function which returns a multidimensional array. How can I pass it as parameter for a subprocedure?

Here's a skeleton of my code:

```
Function CreateAnArray()
```

```
'code to fill a resizable array called MyArray() as String
```

```
CreateAnArray = MyArray()
```

```
End Function
```

```
Sub UseOneArray(OneArray() as String)
```

```
'do things with OneArray()
```

```
End Sub
```

```
Call UseOneArray (CreateAnArray)
```

This code doesn't work. I'd appreciate any help in order to do that.

Regards,

Guillermo
