Hi Chris,

You can set the default caption to whatever you want by setting the Application.Caption property.

This article shows you how to get the current user name, so that you can set the caption to what you want.:

How to get the username of the current user

<http://word.mvps.org/FAQs/MacrosVBA/GetCurUserName.htm>

To get the caption set automatically when you start Word, put the code into a macro called AutoExec. This macro should in turn be placed in a separate template and put into Word's startup folder. This article explains about distributing macros in templates.

Distributing macros to other users

<http://word.mvps.org/FAQs/MacrosVBA/DistributeMacros.htm>

Beware that if you change the application caption in this way, so that "Microsoft Word" is no longer part of the caption, it is possible that some other applications which interact with Word will not work right, if they rely on being able to recognise the caption. This isn't likely to be a problem, but it isn't impossible that it could trip you up.
