

Word Resize/Zoom problem?

Hi,

I'm developing a C#.NET application which insertes data into Word.

When I open the Word-document(template), then I set it's Zoom to be PageFitFullPage:

```
wordApp.WindowState = Word.WdWindowState.wdWindowStateNormal;  
wordApp.ActiveWindow.ActivePane.View.Zoom.PageFit =  
Word.WdPageFit.wdPageFitFullPage;
```

My problem is, that when I close the .NET application, then I leave Word to be available too, I resize Word to be 80% width of the desktop, and 80% height. After this, I set the PageFit, and Zoom properties:

```
wordApp.ActiveWindow.ActivePane.View.Zoom.PageFit =  
Word.WdPageFit.wdPageFitNone;
```

```
wordApp.ActiveWindow.ActivePane.View.Zoom.Percentage = zoomPercentage;
```

The zoomPercentage value is 100, so I set the Zoom to be 100%.

My problem is, that on many documents, after closing the C# application, I try to resize the Word app, and it still seems to be in PageFitFull mode, because if I resize, the Zoom value changes (and also the full page is visible in Word). If I manually enter 100% in the Zoom of Word, it will stay 100% when I resize.

The strange thing is, that on some other documents, if I ran this code, it works properly! So if I resize the WordApp the Zoom stays on 100%!

I don't know what can be the difference between the 2 documents (they are templates though), maybe anyone some advice, how to solve this problem?

Thanks,
Csabi
