Following up on Doug Robbins' suggestions, you may want to look at <http://addbalance.com/word/movetotemplate.htm> for step-by-step instructions on moving / sharing / copying / backing-up customizations including AutoText, AutoCorrect, keyboard assignments, toolbars, macros, etc. This shows how to create a custom global template to take some of the stuff out of normal.dot.

Also, make sure that you have Fast Saves and Versions turned off.
