

Getting Range of a Comment?

I'm using Word 2002. After trying to find a setting that would print only reviewer's comments, AND the text commented on AND the page number of the comment, I gave up and created a macro. In the macro, I got the Range of the comment using Comment.Reference. As far as I can tell, though, this contains only the closing bracket of the comment. I couldn't find a way to locate the opening bracket and set a Range to the entire bracketed text. Any suggestions?

Ed
