I don't believe that the calculator exposes itself to the use of VBA. You could however use vba to ask the use for the inputs to the calculation and to perform the calculation.

I know how to display the Microsoft calculator in Word.

MS says that a two step 'Copy/Paste' operation is the only way to capture the result of a calculation. Is there any way via VBA to more directly capture the answer and automatically get the calculator's answer into the document or into a form field (by clicking one button, for example)?

Thanks,

Ed (in Virginia)
