I talked to the bosses and they want to edit the document, accept the changes and then putting a rev bar in the right margin on the lines that were changed.

Once the changes have been accepted, how will you know what has been changed?

Is there a way to create a macro that had a popup form that would ask how long a line to draw in inches. Then starting on the line that the cursor was in it would draw a line that long in the right margin. The form I know how to create, it's the macro I'm not sure about.

I wouldn't think there is a need to have the form anyway. The length of the line will want to be the same as the current font size. Lines are specified in points in VBA.

In order to draw the line, look up the AddLine method of the Shapes collection in the VBA help.
