

Re: How to create a window showing building block organiser in 2007

the next version, but it's not something to count on, and definitely not available now. And if it does become available, it'll probably be the same tiny unreadable picture you've already said you didn't like.

That's interesting Doug and Greg, MVP Christian Freßdorf says that Building Blocks cannot be previewed in a modeless userform in Word 2007.

You could use a UserForm, displayed as modeless, that contains a combobox, a multiline textbox and a command button named cmbAutotext, txtAutotextValue and cmdInsertComment respectively and have the following code in the User Form

```
Private Sub cmbAutotext_Change()  
With Me.cmbAutotext  
.BoundColumn = 2  
Me.txtAutotextValue.Text = .Value  
End With  
End Sub
```

```
Private Sub cmdInsertComment_Click()  
ActiveDocument.Comments.Add  
Range:=Selection.Range,  
Text:=txtAutotextValue.Text  
End Sub
```

```
Private Sub UserForm_Initialize()  
For i = 1 To  
NormalTemplate.AutoTextEntries.Count  
With NormalTemplate.AutoTextEntries(i)  
Me.cmbAutotext.AddItem .Name  
Me.cmbAutotext.List(Me.cmbAutotext.ListCount  
- 1, 1) = .Value  
End With  
Next i  
End Sub
```

The Initialize statement will load the combobox with the names of the autotext entries, when an entry is

Re: How to create a window showing building block organiser in 2007

selected in the Combobox,
its value will be displayed in the textbox and
clicking on the
command button will insert a comment
containing the selected
autotext at the location of the selection.

Ideally I would like the
window to be formatted
similiat to the
autotext entry
in Word 2003 e.g. shows the
list of names of the items
then a
preview of the
contents of the item. Ideally
it would be a modeless
window that
could float
over the application but this
is not necessary. The basic
context
is that I
use Word Autotext enties to
insert comments into
documents when
making assignments.

It works very well in Word
2003 (the autotext box
allows you to
easily key
through the enteries and the
preview that is shown is
large enough
to read
the entries) but in 2007 it is

Re: How to create a window showing building block organiser in 2007

not as easy to use (the
names are
not shown in
a list and the entries are not
large enough to read). About
13
minutes into
the screen movie at
<http://baker-evans.com/marker%27s-assistant/demo.html>
there is a demo.

Any assistance would be
gratefully received,
Pete Evans
